ProQuest Dissertations & Theses (PQDT)

This database is the world's most comprehensive collection of dissertations and theses from around the world, spanning from 1861 to the present day and offering full text for most of the dissertations added since 1997.

You have access to:

- ProQuest Dissertations & Theses: Business
- ProQuest Dissertations & Theses: Health & Medicine
- ProQuest Dissertations & Theses: History
- ProQuest Dissertations & Theses: Literature & Language
- ProQuest Dissertations & Theses: Science & Technology
- ProQuest Dissertations & Theses: Social Sciences
- ProQuest Dissertations & Theses: The Arts

Abstract (summary)

3 *Background.* Congestive heart failure (CHF) is a syndrome of decreased cardiac output, which is both compensated for and exacerbated by increased total peripheral resistance (TPR). While increased TPR is believed to have a negative impact on the disease's outcome, we have little understanding of its basis. A mechanistic understanding of the vasomotor abnormalities that accompany CHF is a prerequisite for the development of new diagnostic and therapeutic tools.

INFORMATION TO USERS

This manuscript has been reproduced from the microfilm master. UMI films the text directly from the original or copy submitted. Thus, some thesis and dissertation copies are in typewriter face, while others may be from any type of computer printer.

The quality of this reproduction is dependent upon the quality of the copy submitted. Broken or indistinct print, colored or poor quality illustrations and photographs, print bleedthrough, substandard margins, and improper alignment can adversely affect reproduction.

In the unlikely event that the author did not send UMI a complete manuscript and there are missing pages, these will be noted. Also, if unauthorized copyright material had to be removed, this will be noted.
